USER INSTRUCTIONS- MODULIFT 800J/1000

The Modulift Spreader is modular in length. Every spreader consists of 1 pair of End Units & Drop Links, with intermediate struts that can be assembled to achieve different spans. The Modulift 800J/1000 has an assembled span ranging from 2 metres to 26 metres in 1 metre increments.

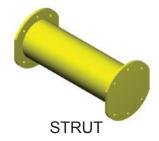

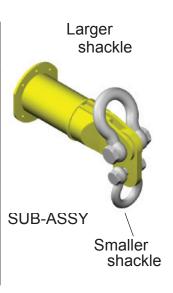

TABLE 1: COMPONENT LIST										
PART REF:	DESCRIPTION	WEIGHT / ITEM								
P1	END UNIT SWL 500t	1100kg								
P2	DROP LINK SWL 500t	395kg								
P3	6.0m STRUT	3220kg								
P4	4.0m STRUT	2290kg								
P5	3.0 STRUT	1830kg								
P6	2.0 STRUT	1370kg								
P7	1.0 STRUT	910kg								
P8	600t WIDE BODY SHACKLE	980kg								
P9	500t WIDE BODY SHACKLE	803kg								
P10	M24 Grade 8.8 HT BOLTS, NUT WASHERS	S &								

Modulift 800J/1000 - Beam Specification.

- Rated at 1000 tonnes SWL at 20 metres span (30° STV). Refer to Load Table.
- 'Sling to Vertical' angle, β, 45 degrees or less.
- End Units & Drop Links are rated at 500 tonnes (1000 tonnes combined capacity).
- Bolt tightening torque: 250Nm. Spanner size required: 36mm.

WARNING!

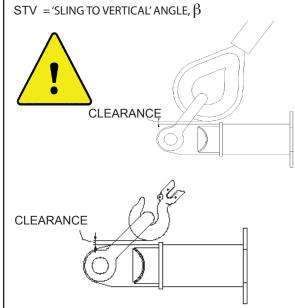

- Personnel using this system should be suitably trained, competent and have a clear understanding of Safe Slinging procedures.
- The use of Modulift equipment must be in accordance with the procedures laid down in 'Lifting Operations and Lifting Equipment Regulations 1998' (LOLER).
- NEVER EXCEED STATED SWL ADHERE TO SWL IN TABLE 2, FOR PARTICULAR SLING ANGLE USED.
- THE SLING LENGTH IS CRITICAL TO THE SAFE USE OF THE SPREADER ADHERE TO TABLE 2.
- Ensure Drop Links hang down, and smaller shackles are connected to bottom hole of Drop Link.

USER INSTRUCTIONS - MODULIFT 800J/1000

The operator must ensure that there is a clearance between the sling end fitting and the end unit as shown.

- Max number of struts allowed in spreader assembly: 6
- Assemble longer struts in the centre of the spreader configuration
- Sling angle is crucial to safe use of spreader

Recommended top sling types: Textile slings, wire rope slings with soft eyes and chain slings with small end fittings. If thimble eyes are used with wire rope slings, make sure sling angle is 30 degrees or less.

Other types exist but not all are suitable due to end fitting size, particularly larger capacity chain hook and thimble eyes. Note: Raising the slings can give greater clearance. Refer to Modulift supplier if in doubt.

ASSEMBLY PROCEDURE.

- 1. Check the ID plates on each Modulift component to ensure the correct size is used.
- 2. Lay out the Struts and End Units in the correct configuration (see table 2), laid on flats to prevent rolling.
- 3. Check that all pairs of flanges are clear from debris, sand etc. before connection.
- 4. Bolt the components together using bolts, nuts & washers provided. Tighten the bolts to a torque as shown overleaf, 10 bolts per connection.
- 5. Place drop link inside the jaw of an end unit, with the larger hole of drop link lined up with the End Unit hole.
- 6. Place a top sling onto the body of a top shackle, and put jaw of top shackle over the end unit jaw.
- 7. Put top shackle pin through shackle, end unit jaw and drop link, and repeat for other spreader beam end.
- 8. Attach free ends of top slings to crane hook.
- 9. Attach lower slings and shackles to lower holes of drop links, and attach them to the load to be lifted.
- 10. The assembled spreader beam and lifting rig must be thoroughly checked by a competent person prior to lifting.

DO's & DON'TS.

- Do ensure to load the spreader through the drop links only. i.e. adhere to Fig. 1.
- Do ensure enough clearance between spreader and the load to prevent the load hitting the spreader. Any collision could cause failure of the spreader.
- Do not undertake a lift without correct use of appropriate top slings.
- Do not hang any load from the spreader tube or flanges.
- Do not exceed stated SWL for that particular span adhere to table 2.
- Do not rig the lower slings more than 6 degrees from vertical.
- Do not twist any slings.
